WORK EXPERIENCE

- Wave Financial

Software Engineer

Toronto, ON

Jun 2024 – Present

 - Led the technical strategy and recovery for a high-stakes production incident involving **Plaid-integrated** banking services; re-architected the deletion workflow using an **AWS S3-based architecture**, unblocking **\$36,000/year** in recurring savings.
 - Resolved a critical cross-functional deadlock on a company-wide data migration by aligning senior stakeholders across 4 teams and auditing **300+ repositories** to map downstream dependencies, delivering the technical blueprint that unblocked implementation.
 - Designed and led** the development of a **Subscription Feature Management Tool**, coordinating cross-team requirements to enable non-technical staff to manage complex permissions and operations.
 - Optimized system performance by implementing Dataloaders for core endpoints, resulting in a **13% reduction in P95 latency** and a **60% reduction in latency spikes**.
 - Volunteered and served as team "Security Champion", taking full ownership of security remediation and automated dependency updates via **Renovate** and multi-threaded CI/CD pipelines to reduce manual maintenance by **90%** and increase build speeds by **1.5x**.
 - Developed internal tooling for automated dependency tracking and presented it in a company-wide Tech Talk to **80+ engineers**, driving adoption across multiple teams.
- Wave Financial

Software Developer Intern

Toronto, ON

May 2023 – Aug 2023

 - Drove a significant revenue increase by overhauling **Wave Checkouts** using **React, TypeScript, and GraphQL**, enabling payments without individual invoices for a platform serving **325,000+** businesses.
- Vidyard

Software Developer Intern

Kitchener, ON

Jan 2023 – Apr 2023

 - Architected and implemented a TypeScript library for video background virtualization leveraging **TensorFlow** used across multiple applications by over **760,000+** businesses and individuals.
- CloudOps

Software Developer Intern

Montreal, QC

May 2022 – Dec 2022

 - Leveraged the **AWS Java SDK** to develop tools for managing **EKS Kubernetes clusters**, enabling users to provision cloud resources from AWS, GCP, and Azure.
- NCR Corporation

Software Developer Intern

Waterloo, ON

Sep 2021 – Dec 2021

 - Upgraded **Zelle payment API** implementations for a money movement application serving over **3,000,000** monthly active users.
- Nymion Solutions

Software Developer Intern

Montreal, QC

Apr 2021 – Aug 2021

 - Developed full-stack data privacy software using **Java, Python, and Node.js**, with **Docker** containerization and deployment on **AWS**.

PERSONAL PROJECTS

- Auto Mega

Source Code

 - Developed a full-stack search aggregator using **Java, Spring Boot, React, and MySQL** that centralizes vehicle listings from multiple major Canadian automotive marketplaces.

SKILLS

Languages:	English (Native), Japanese (JLPT N5 Dec 2025 · N4 July 2026 · N3 planned Dec 2026)
Backend:	Python, Java, GraphQL, Django, Spring Boot, Node.js
Infrastructure:	AWS (S3, EKS, EC2), Datadog, PostgreSQL, Redis, Docker
DevOps/Tools:	GitHub Actions, CircleCI, Renovate, Git, Jira, Figma
Frontend/Testing:	TypeScript, JavaScript, React, Vue.js, Jest, Cypress

EDUCATION

- University of Guelph

Guelph, ON

Bachelor of Computing (Honours) - Computer Science | GPA: 4.0/4.0

Sep 2019 – May 2024
